ZENOM PLATFORM

zenom

Application Engineering Platform for Core Enterprise Operational Systems

From Business Intent to Production Source Code in Under 10 Days

Built Fast • Built Right • Built Governed • Built to Change • Built to Be Yours

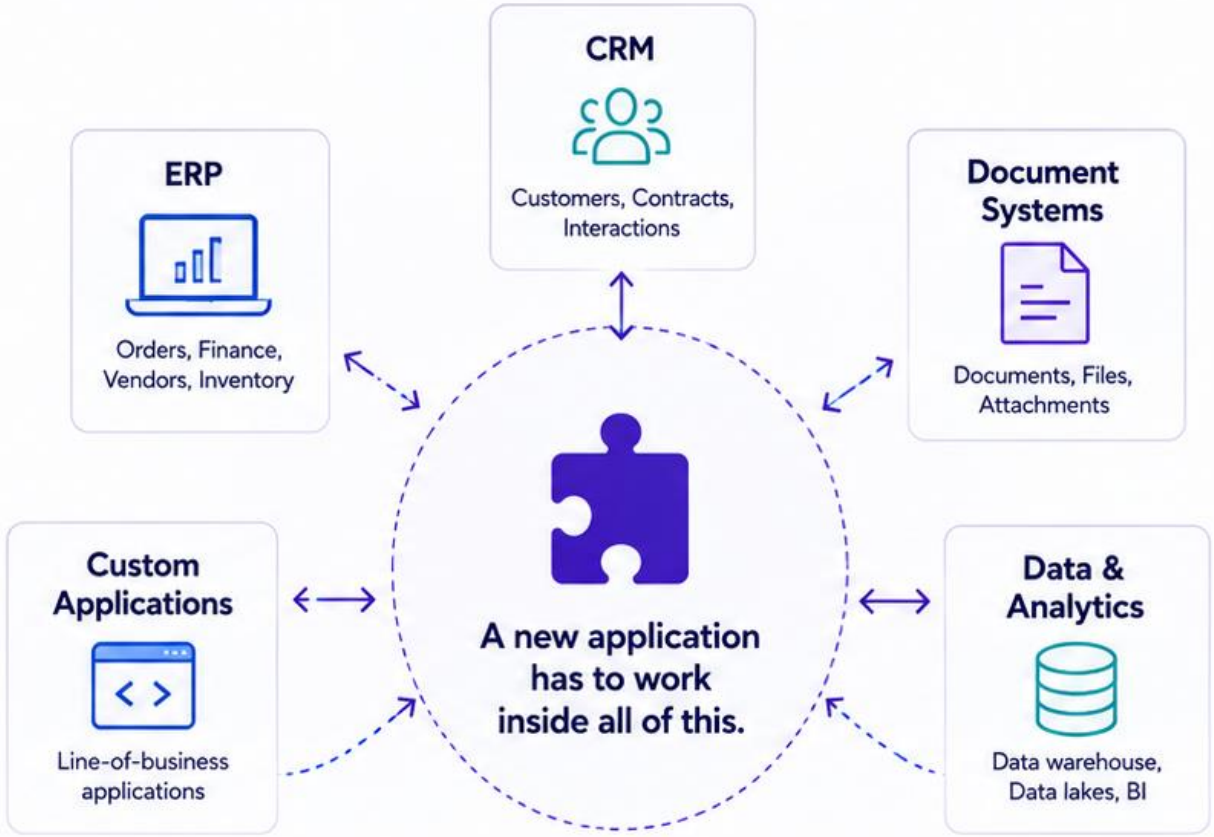

By

InnovaceInTech Pvt Limited

THE PROBLEM -

The Enterprise Playground

Enterprise applications are not built on a blank page.

Existing systems

ERP, CRM, document systems, data and custom applications already exist.

Multiple vendors

Different products, roadmaps and release cycles.

Shared business context

The same customer, order or contract appears across many systems.

Governance

Approvals, access, policies and audit requirements apply across the operation.

The challenge

A new application has to work inside all of this.

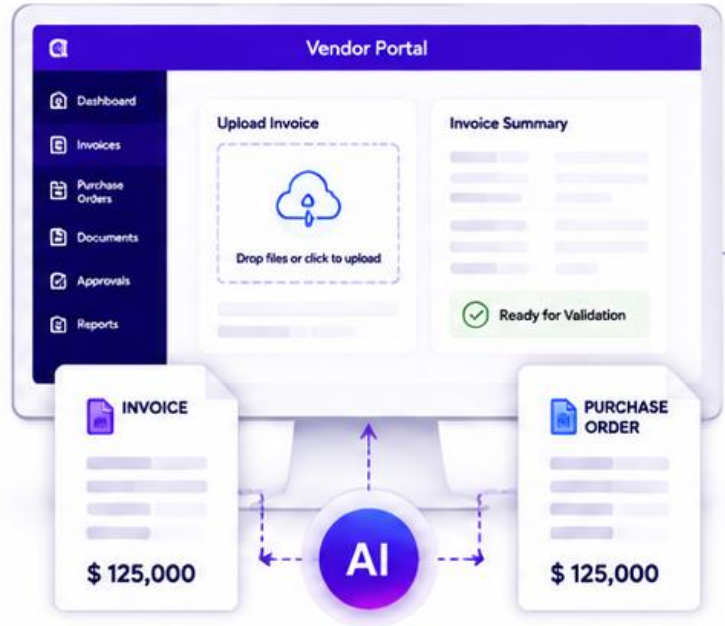

The enterprise playground is complex, connected and governed. | Your application has to fit right in.

THE ENTERPRISE PLAYGROUND (cont)

What happens when a Simple Business Request is raised

One screen. A lot behind it.

> "Build a vendor portal. Let vendors upload invoices. Use AI to read the invoice and purchase order and compare the clauses. Dont approve the invoice unless customer has approved work completion, PM has certified work, margins are computed"

Business Conditions

- Customer approved work completion
- PM certified work
- Margins are computed
- Compare clauses
- Don't approve invoice unless all conditions are met

Behind that request:

1. Understand the operational nuances

Know the process, exceptions, roles and policies.

2. Integrate with ERP and other systems

Connect to ERP, CRM, documents, data and services.

3. Keep AI bounded

Use AI for extraction and comparison within defined guardrails.

4. Apply approvals and checks

Customer, PM and business checks with full audit.

5. Trigger workflows

Route to the right people at the right stage.

6. Apply deep business rules and logic

Margins, clauses, penalties, policies and decision tables.

7. Enforce access and policy

Role based access, segregation, and data security.

8. Build the right experience for each role

Vendors, PMs, approvers, finance, leadership.

One request. Eight things have to work together. | This is the enterprise reality.

CURRENT ALTERNATIVES

Each one does part of the job well.

AI DEVELOPMENT TOOLS

Very good at:

- Building software fast
- Great for developer productivity

Where it stops:

- Trust deficit for Regulated industries
- Deep business rules - subtle business logic errors
- Probabilistic code risk
- Hard to enforce risk
- No carry forward

AI LOW-CODE

Very good at:

- Building applications through configuration
- Handles complex workflows
- Faster application delivery

Where it stops:

- Complex logic often needs custom code
- Application remains tied to the platform
- Permenant Vendor dependence

PACKAGED SOFTWARE / ERP

Very good at:

- Running the processes they were designed for.

Where it stops:

- Slow and expensive to cange
- Inflexible extension
- High Vendor Lock-in

The gap is not building software. It is building enterprise operations quickly, correctly and repeatedly.

WHAT IS ACTUALLY NEEDED

Business and technology working together

Business Teams
Define what is needed to run and improve operations.

IT Teams
Ensure it fits the enterprise, integrates and operates securely.

1 Work with what already exists

- Systems, data, security and operating policies stay in place.
- Leverage existing investments.

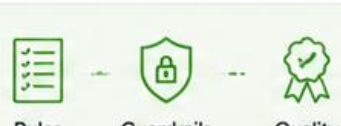

2 Build the complete operational application

- Web and mobile experiences
- Workflows
- Automation
- Integrations
- Purpose-fit AI

3 Keep it controlled

- Business rules are explicit.
- AI works inside guardrails.
- Quality is repeatable.

4 Deliver fast and leave the customer in control

- Fast first build.
- Fast changes.
- Predictable cost.
- Customer-owned source and deployment.

5 Built for enterprise operations

- Scales across roles, processes and regions.
- Evolves with the business and technology.

This is the gap Zenom is built for.

Helping enterprises build governed operational applications that fit, perform and evolve.

What LLMs have done for individuals, Zenom aims to do for Enterprise Operations.

LLMs

INDIVIDUAL WORK

- Developers
- Designers
- Analysts
- Knowledge Workers

Augment intelligence.
Accelerate creation.

Zenom

ENTERPRISE OPERATIONS

- Processes
- Workflows
- Business Rules
- Applications
- AI Agents
- Measurement

Augment operations.
Accelerate transformation.

INTRODUCING ZENOM

Zenom is an application engineering platform for core enterprise operations.

It helps functional and technical teams build governed operational systems quickly.

Modern Web & Mobile Applications

Complex Workflows & Process Orchestration

Functional Logic & Business Rules

Straight-Through Processing & Deterministic Automation

Purpose-Fit AI Agents

APIs & Integrations

Measurement & KPIs

SOURCE CODE GENERATION

CI / CD AUTOMATION

ENTERPRISE PATTERNS & ARCHITECTURE

ZENOM CAPABILITIES

Everything you need to build governed operational systems—fast.

Modern Web & Mobile Applications

- Responsive web experiences
- Mobile-first design
- Role-based portals
- Reusable UI components
- Accessibility & usability built-in

Complex Workflows & Process Orchestration

- End-to-end process orchestration
- State management & worklists
- Parallel & conditional flows
- SLA & escalation management
- Human-in-the-loop

Functional Logic & Business Rules

- Business rules engine
- Decision tables
- Validations & policies
- Pre / Post conditions
- Configurable rule framework
- Versioned rule sets

Straight-Through Processing & Deterministic Automation

- Straight-through flows
- Deterministic orchestration
- No manual handoffs
- High throughput automation
- Consistency by design
- Audit-ready execution

Purpose-Fit AI Agents

- Domain-specific AI agents
- Context-aware execution
- Document & data extraction
- Recommendations & insights
- Governed AI guardrails

APIs & Integrations

- REST / GraphQL APIs
- Pre-built connectors
- Event-driven integrations
- Secure, scalable integration layer
- API lifecycle management

Measurement & KPIs

- Real-time dashboards
- Operational KPIs
- SLA monitoring
- Custom metrics
- Alerts & notifications
- Insights for continuous improvement

SOURCE CODE GENERATION

Deterministic compilation engine generates clean, secure and maintainable production source code. Customers own the source code.

CI / CD AUTOMATION

Built-in CI/CD pipelines for automated build, test, security scan, deploy and release management.

ENTERPRISE PATTERNS & ARCHITECTURE

Pre-built enterprise patterns, reference architectures and best practices ensure governance, scalability, security and long-term agility.

AI FOR DEVELOPMENT

From Business Intent to Production Applications.

Zenom Agentic AI Studio

Build purpose-fit, governed AI within deterministic guardrails.

THE ZENOM DIFFERENCE

The USP is not any one capability. It is all five together.

Five doctrines. One platform. Infinite operational advantages.

BUILT FAST

AI + Deep Automation to move at speed.

BUILT RIGHT

Enterprise patterns for structural correctness.

BUILT GOVERNED

AI within guardrails. Governed by default.

BUILT TO CHANGE

Configuration over rebuild. Adapt without disruption.

BUILT TO BE YOURS

Source code ownership. Deploy anywhere. Run on your terms.

ONE APPLICATION ENGINEERING PLATFORM

Canonical Models | Deterministic Orchestration | AI within Guardrails | Integrated Governance

Days, Not Quarters
Go from intent to production in days, not months.

Enterprise-Grade by Design
Secure, compliant, and reliable — from day one.

No Runtime Lock-In
Own your applications. Run anywhere. Change anytime.

Compose Operations. Govern Change.

ZENOM IN PRODUCTION

Built across industries. Proven in real operations.

IIT Dharwad

Education

- Complete module in 10 working days

Trade Finance for a Large European Bank

Banking / Trade Finance

- Trade Finance application in 7 working days

Vertiv Energy

Enterprise Operations

- Procure-to-Pay automation

Ministry of Education, Zambia

Government / Education

- Enterprise operational systems

Large Business Conglomerate in India

After Sales Service
Core Operations Management System

- After sales service core operations management system

WHERE ZENOM FITS

For organizations that already have core systems.

Extend, orchestrate and automate for greater agility and impact.

LARGE ENTERPRISE

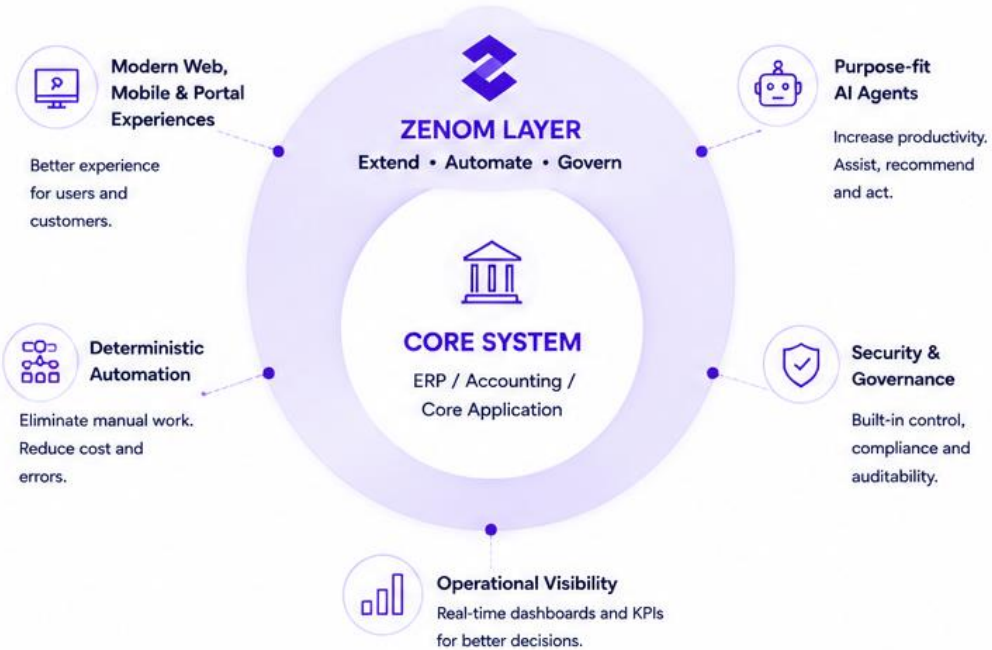

Orchestrate and transform across a complex landscape.

- Connected enterprise
- Faster change and innovation
- Governed by design
- Measurable business outcomes

SME

Build a flexible operational layer around your core system.

- Go live faster
- Lower operating cost
- Higher productivity
- Enterprise-grade by design

Leverage what you have. Extend what you need. Transform how you operate.

WHERE ZENOM FITS

For businesses building their operational core.

Start where you are. Build what you need. Grow without limits.

SMALL ENTERPRISE

Build a flexible core operational system.

Start with what the business needs. Expand as the business grows.

- Ready-to-run operational applications
- Configure and extend as business grows
- Modern web and mobile experiences
- Deterministic automation to reduce operating cost
- Purpose-fit AI agents for higher productivity
- Built governed and secure from day one

Go live faster | Predictable cost | Scales with your business

STARTUPS & SOFTWARE VENTURES

Build your niche application on Zenom.

From idea to market, in weeks.

- Significantly reduce development effort and cost
- Launch faster
- Flexible revenue-sharing models
- Focus on domain innovation. Leave the operational engineering to us.

Time to market ↓ | Innovation ↑ | Own your growth

Zenom gives every business the power to build, scale and evolve its operational systems.
