The Ilios Advantage

A leading Multi-Cloud Consulting and Transformation Partner for Enterprises in India.

We are a Global Technology company that helps enterprises stay ahead in the digital era.
We provide high-value, cost-effective technology-driven solutions to solve business problems.

Our Cloud Capabilities – Powerhouse for all cloud needs

ILIOS DIGITAL

CLOUD OFFERINGS

Cloud Reselling
Unified billing, AWS, Azure, GCP

Cloud Professional & Migration Services
Architecture, migration, DevOps, Gen-AI

Cloud Managed Services
24x7 support, cost, security, compliance

Cloud Training & Enablement
Workshops, DevOps, architects

Cloud SaaS Development
SaaS, microservices, containers, serverless

SPECIALIZED SERVICES

Well Architecture Framework Review
IAM, encryption, firewall, threat, audit

AI/ML & Gen-AI
Free PoC with Cloud Native Service

Cost Optimization Tool
Save your Cloud Cost using our Cost Optimization Tools

DevOps Engineering
CI/CD, Terraform, containers, automation

Reporting & Analytics
ETL, dashboards, SLA & compliance

AI Digital Transformation Projects

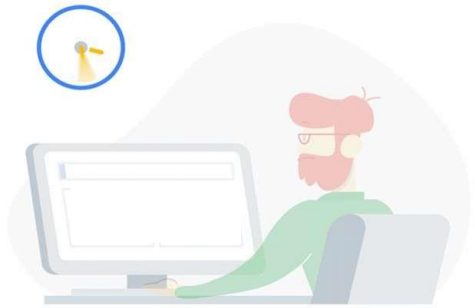

The most comprehensive AI Infirastructure

Open and accessible across layers to serve customer needs

Government AI & Gen AI Solutions

- Citizen Service delivery and Government productivity
- Digital Agriculture (Seed to Market)
- Geospatial Analytics & AI use cases - Flood monitoring, Air Pollution, Defiorestation
- Wildlifie conservation

Citizen Services & Government Productivity

Gen AI enabled search bar fior Government Websites

Generative summary based semantic search enabled Government web sites

- Common Gen AI enabled search fior all govt. websites fior citizens to address their firequently asked questions.
- Common Gen AI enabled search bar fior government workers to empower them with latest govt. policies, guidelines and best practices
- Limits the search knowledge base to Government websites only

Demo https://search.ap.gov.in/

- Hosted on GCP IaaS and PaaS services
- Uses Gen AI services - LLM, Vector Search, Embeddings and Vector DB
- Use Google translation, STT and TTS services
- Web, iPhone and Android phone supported

Citizen Services & Government Productivity

AI Conversational Chatbot and Search for Government Employees

Agentspace - AI Assistant for Government workers to answer their queries related to GO, Policies, Guidelines, etc.

- Gen AI enabled chatbot and search for government workers to empower them with latest govt. policies, guidelines and best practices
- Limits the knowledge base to Government Orders, Policies and Guidelines document only
- Provides Agents for day-to-day work

https://vertexaisearch.cloud.google.com/home/cid/b7868d5a-d86a-485b-b636-9da83cf10797

- Uses Gen AI Agentspace service - 1P AI-enabled SaaS
- Web, iPhone and Android phone supported
- Low-code No-code Agent builder

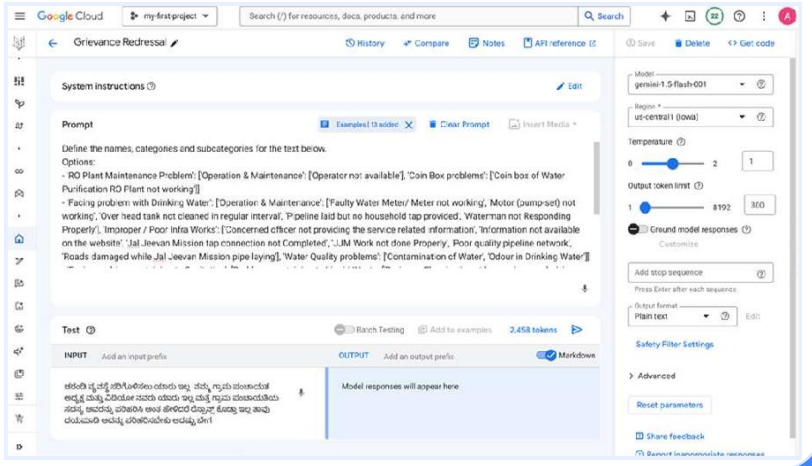

Citizen Services & Government Productivity

AI-enabled Citizen enquiry classifiication system

Make it simple fior citizens to report their grievances and government to direct it to the relevant department

- Simple easy to use interfiace (Voice-enabled chatbot in native indian language) fior citizens
- Grievance classifiication using trained multi-modal AI model.
- Hosted on GCP
- Uses AI and Gen AI GCP services

Enable Government to direct the citizen enquiries to the relevant government department & line departments

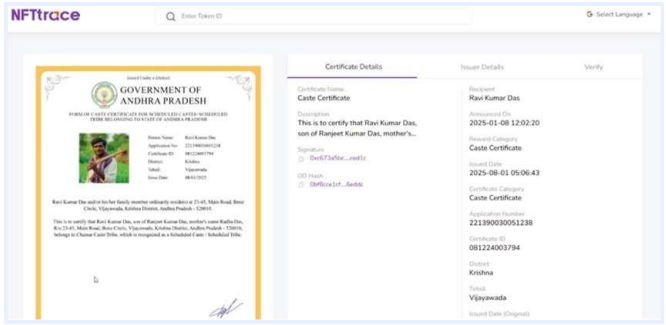

Citizen Services & Government Productivity

Blockchain-Based Verifiiable Credentials For G2C Service

Verifiiable credentials like Education, birth certifiicates using blockchain

- Blockchain-enabled tamper-proofi, easily verifiiable government issued certifiicates like birth, death, education certifiicates making it simple fior citizens to access and share their certifiicates globally in real-time.
- Tokenize & transfiorm any certifiicate into immutable Selfi-Sovereign Blockchain Assets (NFTs), eliminating the risk ofi firaud and ensure data integrity.
- Non-fiungible tokens (NFTs) digital identifiiers recorded on a blockchain certifiy ownership and authenticity
- Quick Authentication using simple QR code scan.
- Strong 4- step verifiication process fior preventing counterfieiting

- Quick & Easy Issuance/Re-Issuance and Bulk Issuance ofi certifiicates
- Hosted on GCP IaaS and PaaS services
- Uses SutR blockchain as a service
- Web, iPhone and Android phone supported

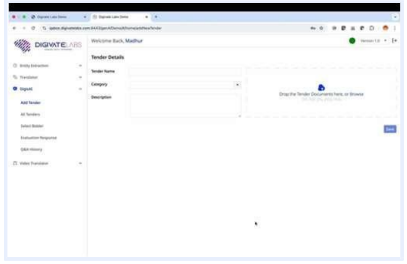

Government Productivity

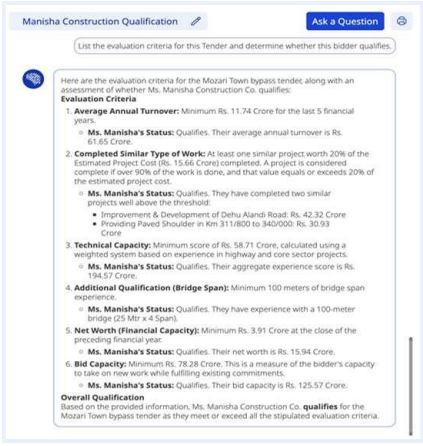

AI Enabled Tender Evaluation

Reduces time and improves accuracy ofi bid evaluation process fior RFP

- Automated assessment ofi tender responses based on predefiined criteria, such as experience, fiinancial stability, technical, capabilities, and compliance requirements
- Enable fiaster tender evaluation, reduced administrative burden, and ensuring objective decision-making based on predefiined criteria
- Tabulate bidder responses against standard / custom evaluation criteria fior easier comparison and evaluation

- Hosted on GCP IaaS and PaaS services
- Uses Gen AI services - Gemini LLM, Vector Search, Embeddings, Cloud Storage and Vector DB

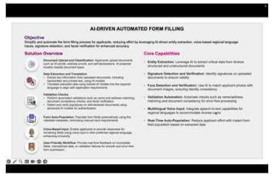

Citizen Services & Government Productivity

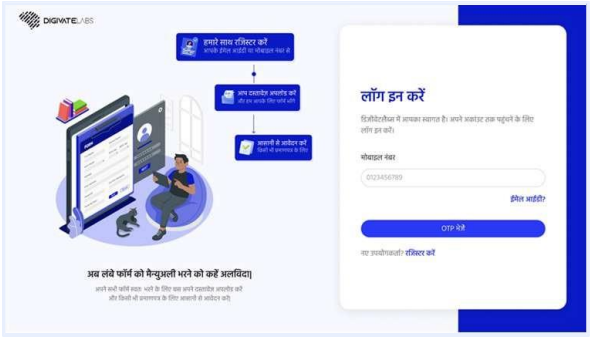

Automated Form Filling For Citizen Services Applications

Simple, fiast and audio enabled online fiorm fiilling fior citizen services

- AI-enabled auto-completion ofi the fiorm fiields. Reducing the number ofi fiields to be completed by the citizen.
- Audio inputs / selection options provided fior remaining fiields in the fiorm in indian languages
- AI-enabled documents classifiication, infiormation extraction and translation
- AI-enabled validations such as name matching, address matching, fiace verifiication are perfiormed fior data sanctity
- Form fiields are auto-populated firom the extraction metadata

- Hosted on GCP IaaS and PaaS services
- Uses Gen AI services - Document AI, Vertex AI, Document OCR, Gemini, Cloud Storage, Google Speech, Google Language Detection, Translation, Vector Search
- Web, iPhone and Android phone supported

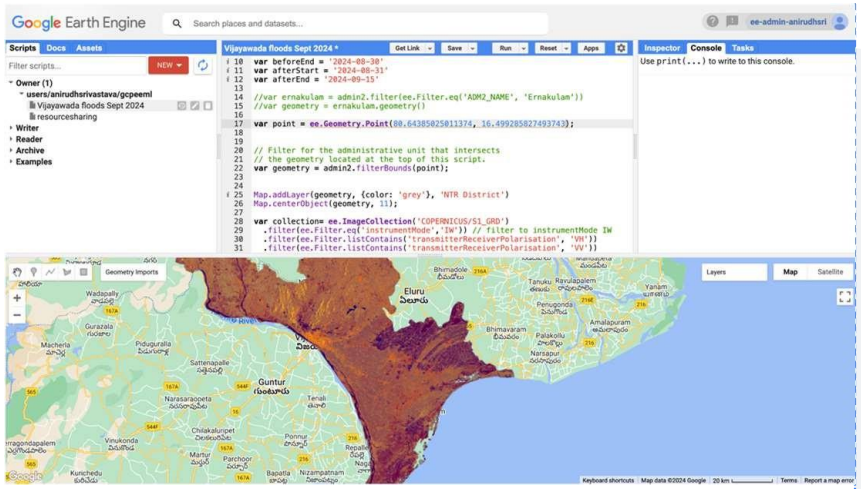

ILIOS DIGITAL

Geospatial analysis

Geospatial analytics for data-driven decision making

- Google Earth Engine stores 80PB of Satellite imagery
- Flood analysis using satellite imagery (Sentinel-1 SAR)
- Air Pollution analysis (Sentinel-5P)
- Defiorestation analysis (Hansen GFC)
- Hosted on GCP
- Seamless integration with GCP Data Analytics, visualization and AI/ML services

Agricultural landscape understanding

1. High resolution imagery and AI/ML position Google to create these insights as a unique value proposition— unprecedented in the industry.
2. Organize the agricultural infiormation at an individual fiarm fiield level.
3. Provide that as a base layer fior those in the agri-ecosystem to build their solutions on top ofi.

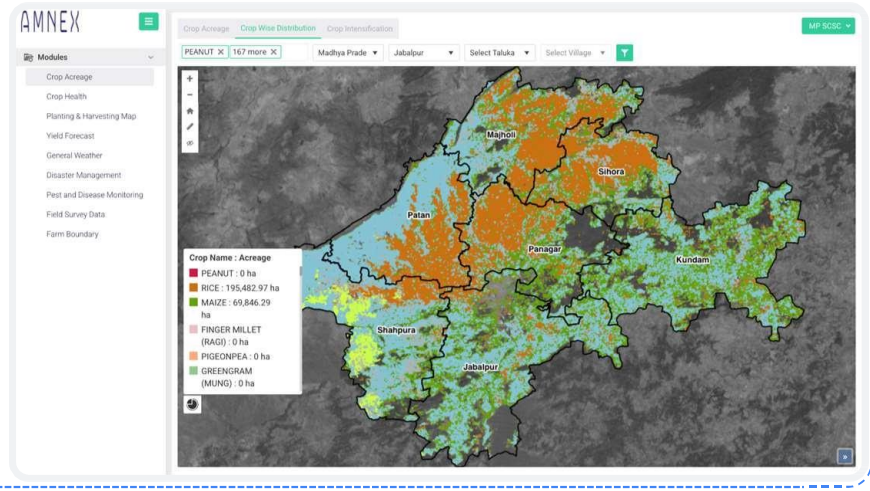

Agriculture

Geospatial AI enabled Agriculture monitoring platfiorm

Web-based decision support system fior the government - agriculture department

- Crop acreage maps and statistics at the taluka level
- Crop health - indices-based assessment
- Crop Yield - Satellite and crop model based yield fiorecasting
- Weather condition monitoring - Area wise weather monitoring and fiorecasting
- Online reports fior crop loss assessment, demand management.
- Land parcel classifiication using satellite data
- Hosted on GCP - IaaS, PaaS services
- Uses Google Earth Engine fior Geospatial analysis services

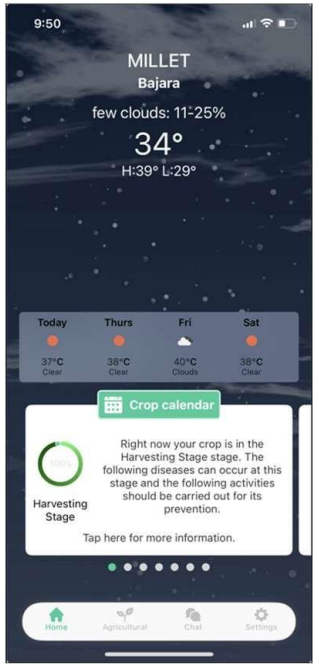

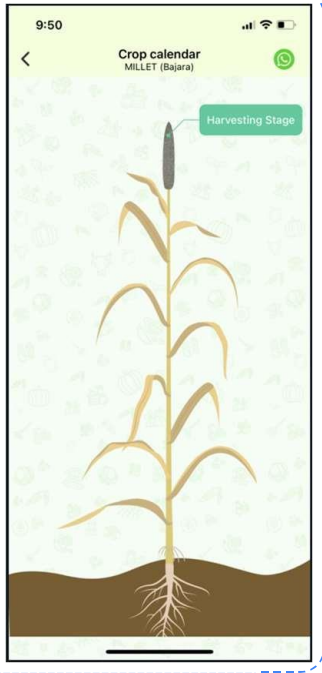

Agriculture

Farmers Personal Advisory App

Mobile app on Farmer's smartphone to provide personalized advisory and real-time infiormation

- Crop selection advisory
- Monitor land parcel-wise crop health and soil health condition
- Fertilizer recommendations based on soil profiile
- Chatbot in native indian languages to address queries with SMEs
- Provides details about dealers, agro machinery, fiarm equipments, fiertilizers, pesticides, sees in nearby areas.
- Daily alerts and push notifiications fior weather, crop management, sowing time, and advisories.
- Hosted on GCP in India - IaaS, PaaS services
- Uses GEE fior Geospatial analysis services, Vertex AI fior AI, Gen AI
- Android and iphone app

Human Animal Confilict Management System

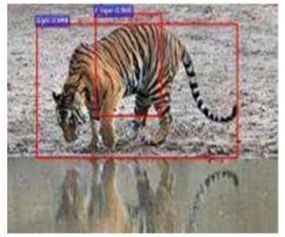

Image Classification Of Species

Wildlife sancturies and forests are spread across vast lands. The camera traps are usually installed here for various reasons such as:

- To monitor wildlife population and its behavior
- To monitor human- animal conflicts and poaching by taking preemptive action to avoid mishaps
- To conduct wildlife surveys
- To collect data for scientific research

These cameras capture the images of the animals whenever the animals are within the vicinity of the cameras.These images are currently stored in hard disks.

HOWS ITS DONE?

Images are captured through the installed cameras → The images get stored in the SD Card → These images are then retrieved from the SD Card

What's the Challenge With This Process?

- The data is kept in silos. The data is vulnerable to physical damage (hard disks can be lost, damaged or stolen) and has limited accessibility, as it can be accessed only from the location where it is stored
- Improper classification of the species

Human Animal Confilict Management System

The Installation Setup

We have also added a Public Address System – where the announcements are made in local language – Marathi (in this case)

Solar Panel

Hooter

Power and Connectivity Panel: power control unit, communication unit

Lights

Camera: with internet and edge capabilities, used to transmit images to cloud for animal classification

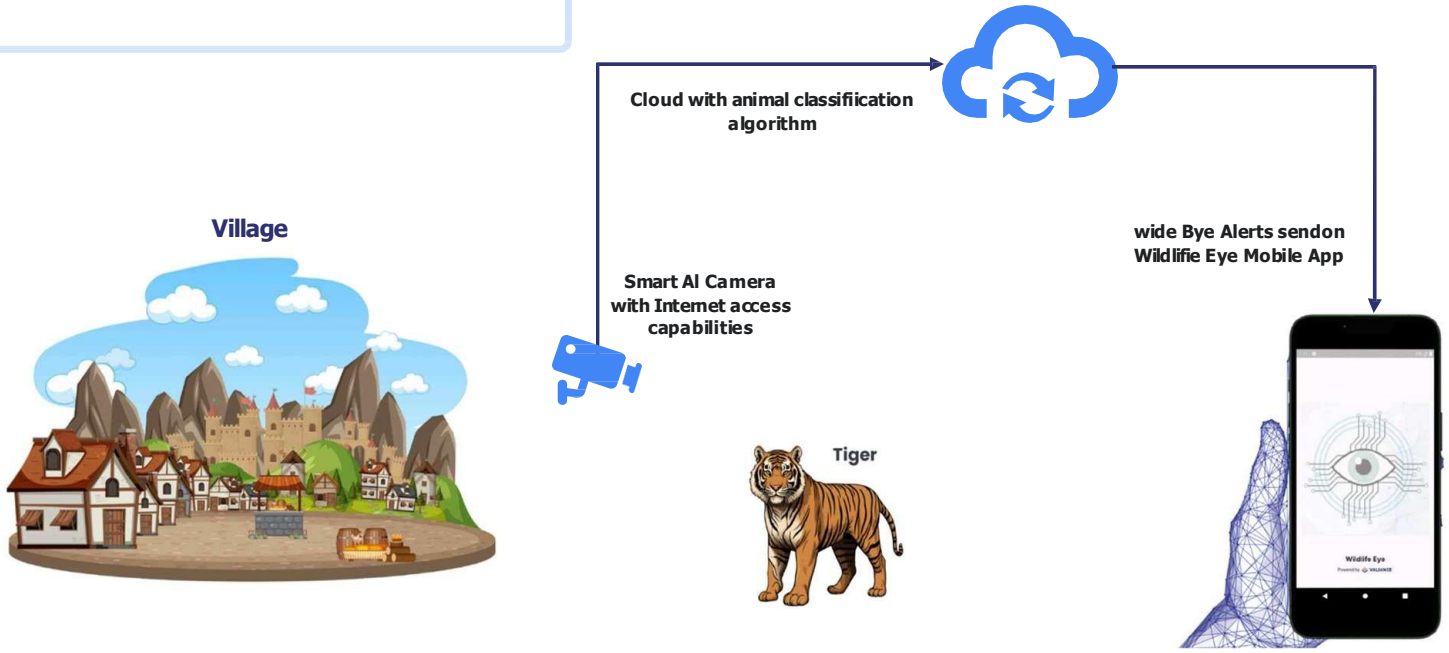

Battery / Inverter UPS Box

Our proprietary and innovative and first of its kind solution uses a combination of computer vision and artificial intelligence to identify potential animal encroachments

Human Animal Confilict Management System

How it Works?

Proprietary + Confidential

AI-Driven GST Filing and

Discrepancy Detection System

ILIOS DIGITAL

PROBLEM & CONTEXT

1. 

Different industries have varying tax rates (IGST, CGST, SGST).

2. 
Common errors occur in manual GST assessment

3. 
Current manual verification is time-consuming and prone to mistakes.

METHOD FOLLOWED

1. 
Automate anomaly detection in GST filings using AI to verify tax compliance.

2. 

Develop an AI algorithm to validate filed taxes against industry-specific rates.

KEY FEATURES

- Tax Rate Validation: Cross-check GST filings with the correct IGST, CGST, and SGST rates.

- Anomaly Detection: Automatically flag discrepancies in tax amounts.

- AI Algorithm: Continuously updated algorithm based on tax laws for various industries.

- Automation: Reduce manual effort and improve filing accuracy.

- Reporting: Generate show cause notices highlighting potential errors.

OBJECTIVE

- Generating the discrepancy notice using GST data and the books provided.
- Generating the audit report using the discrepancy notice.
- Search & Summarization .

DATA SETS

Input Data:

- Discrepancy Notices
- GST Tax Filings: GSTR-1, GSTR-3B,GSTR-2A, GSTR-9, , reply filed by the tax payer
- Financial Documents: Books of accounts, Balance Sheets, Profit and Loss Statements.
- GST Manual and Amendments: Tax laws, amendments, industry-specific tax rates.
- Responses from the taxpayer
- *Other supporting documents*

Output Data:

- Audit Reports
- Highlighted Anomalies
- Discrepancy Reports
